

Bees are invaluable in raising plants of all kinds. There are 18 varieties of Oregon bees. The most common The Honey Bee, we are most familiar with, is an invasive species. They were imported from Europe by our early settlers and with the massive gardening of crops, the honey bees are now a necessity to feed our population.

Cynthia Moyer, Educational Chair of Douglas County Bees, will be our speaker at the [September 23rd 3pm Social Hour](#) in the Clubhouse Dining Room. She will answer many questions, as well as telling us about the necessity of supporting pollinators.

In addition, she will bring some super pollinator plant seeds and literature. Cynthia and her husband Charlie chair Douglas County Bees Organization, with regular meetings of their group the first Wednesday of each month in Roseburg. See them on Facebook for additional information.

So comb your hair and bring your honey, to hear about how to assure beautiful flowers, healthy plants and nutritious food.
